About This Content

This is the pro version of Cosmic Sugar. Particles form a simple but elegant physics sandbox. The secret is in the instruments which allow users to visualize complex and dynamic forces. In addition to gravity, the only tool available in the free version, the Pro version includes a variety of instruments:

Cymatics

Orbit

Noise

Draw

Draw a line between controllers

Draw a curved line between controllers

It includes global sliders:

Speed and Mass

Saturation and Brightness

Noise

Audio Reactivity

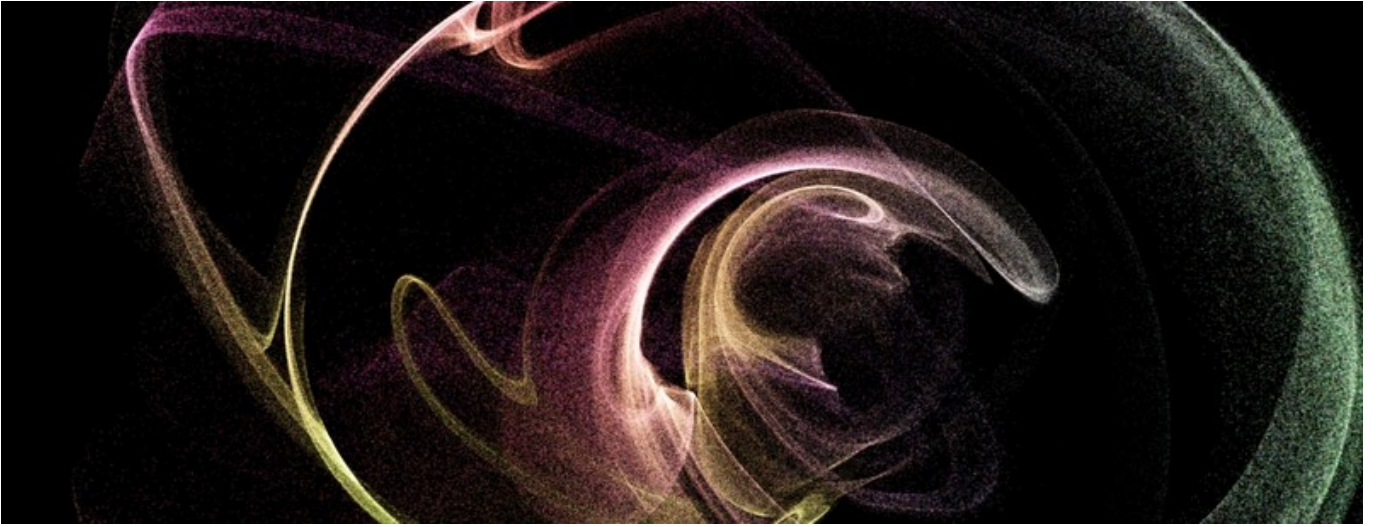

Brush Radius and Distance

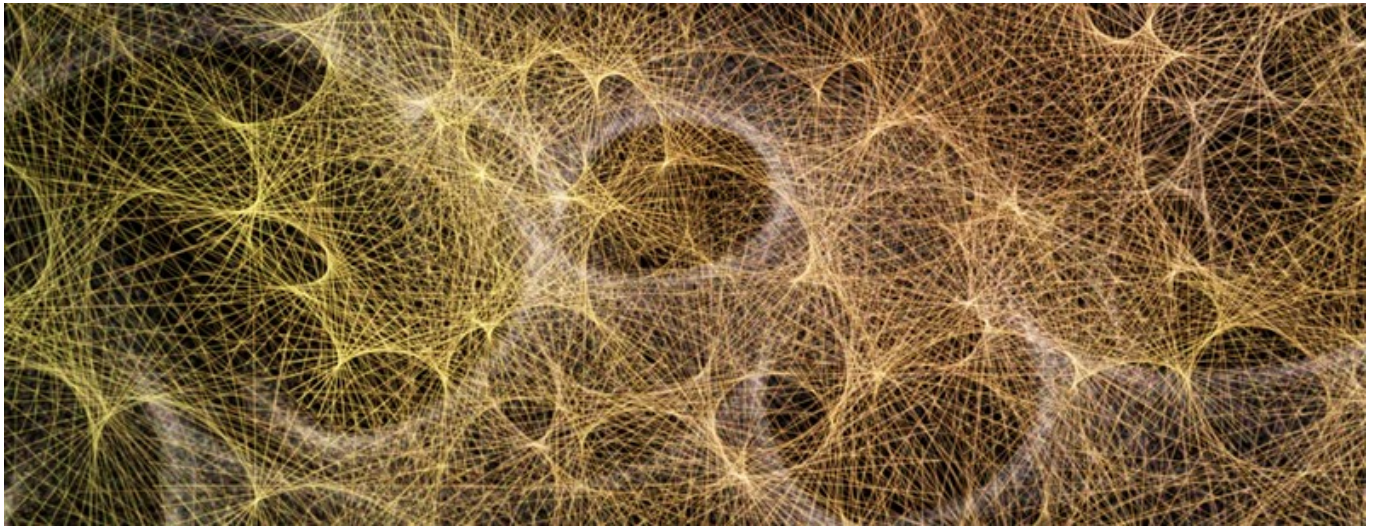

It allows you to play with 1,2,4, and 8 million particles simultaneously.

So this is still probably my favorite VR application.

The one thing I will say is, with the new update you added a wall that stops the particles from flying away.

I don't like this and there should be an option to switch back to the old version (without invisible particle wall).

I liked being able to send my particles flying way out into space.

I feel constrained in a box now instead of feeling like I was in infinite space.

Love the game still. Worth the \$5.

But please get rid of the invisible particle wall so that the sandbox is infinite like it used to be.

Makes no sense to have the particles stop at an invisible boundary.
